

# Don't let dirty water go down the storm drain

the things on your driveway get washed into the storm drain when it rains. The pipes under the drain lead to the river.

1

keep fertilizer on the grass

2

don't use too much salt on the ice

3

try not to let sidewalk chalk go down the drain

fertilizer can cause algae to grow in water. Too much salt is bad for fish. Chalk makes water dirty.

other things to not let go down the storm drain: leaves, trash, grass clippings, chemicals, and unnatural things.

try your best to keep rivers healthy!
